Labs II: Encoding information and sharing it (e.303)

Investigate a compromised Linux host

CIRCL Computer Incident Response Center Luxembourg

MISP Project
https://www.misp-project.org/

March 21, 2022

Lab e.303

- A compromised Linux host needs to be analysed and the only evidence is a single **network packet capture file**[1].
- No more information or context were given.
- Investigation and **interpreting results must be shared** with colleagues and other CSIRTs.

Open general questions and leads

- What could **be deduced from these evidences** by using mainly the **MISP instance** and misp module expansion?
- How can you describe your investigation in a structured way and as a textual report in MISP?
- Can you attach **level of confidence** in your analytical judgment and probability of likelihood?
- Can we would describe **preventive measure(s)** for such case?
