# INTRODUCTION

2022-03-25

Data mining Tor, social networks, OSINT with AIL  
Project

└ Introduction

INTRODUCTION

- **Deep Web** is the part of World Wide Web not indexed or directly accessible by standard web search-engines;
- This can be content hidden from **crawlers** by requiring a specific access and this can include private social media, password-protected forums or content protected by different measures such as paywalls or specific security interface to access the information;
- A large portion of content accessible via Internet is part of the deep web<sup>1</sup>.

<sup>1</sup>also called invisible web, hidden web or non-indexed web

2022-03-25

## Data mining Tor, social networks, OSINT with AIL Project

### └ Introduction

### └ Concepts - Deep Web

1. There is a huge misconception about the difference between the darknet and deep web. The differences are important because it's two different aspects which can be related to each other.

- **Deep Web** is the part of World Wide Web not indexed or directly accessible by standard web search-engines;
- This can be content hidden from **crawlers** by requiring a specific access and this can include private social media, password-protected forums or content protected by different measures such as paywalls or specific security interface to access the information;
- A large portion of content accessible via Internet is part of the deep web<sup>1</sup>.

<sup>1</sup>also called invisible web, hidden web or non-indexed web

- **Darknet** is an overlay network running on top of Internet requiring specific software to access the network and its services;
- Tor, I2P and Freenet are the most commonly used ones. Many are used for hidden services access and some for proxy access to the Internet;
- There are **legitimate use-cases** for such network but also many **illegal or criminal usage**.

- **Darknet** is an overlay network running on top of Internet requiring specific software to access the network and its services;
- Tor, I2P and Freenet are the most commonly used ones. Many are used for hidden services access and some for proxy access to the Internet;
- There are **legitimate use-cases** for such network but also many **illegal or criminal usage**.

2022-03-25

Data mining Tor, social networks, OSINT with AIL Project

└ Introduction

└ Lifecycle of collection and analysis

# COLLECTING, PROCESSING AND ANALYSING CONTENT - WEB PAGES

- Building a search engine on the web is a challenging task because:
  - ▶ it has to crawl webpages,
  - ▶ it has to make sense of **unstructured data**,
  - ▶ it has to **index** these data,
  - ▶ it has to provide a way to retrieve data and structure data (e.g. correlation).
- Doing so on Tor is even more challenging because:
  - ▶ services don't always want to be found,
  - ▶ parts of the dataset have to be discarded.
- in each case, it requires a lot of bandwidth, storage and computing power.

2022-03-25

## Data mining Tor, social networks, OSINT with AIL Project

### └ Introduction

### └ Collecting, processing and analysing content

- Building a search engine on the web is a challenging task because:
  - ▶ it has to crawl webpages,
  - ▶ it has to make sense of **unstructured data**,
  - ▶ it has to **index** these data,
  - ▶ it has to provide a way to retrieve data and structure data (e.g. correlation).
- Doing so on Tor is even more challenging because:
  - ▶ services don't always want to be found,
  - ▶ parts of the dataset have to be discarded.
- in each case, it requires a lot of bandwidth, storage and computing power.

# COLLECTING, PROCESSING AND ANALYSING CONTENT - STRUCTURED DATA

- Some data are structured and are easy to process:
  - ▶ metadata!
  - ▶ API responses.
- Some even provide cryptographic evidences:
  - ▶ authentication mechanisms between peers,
  - ▶ OpenPGP can leak a lot of metadata
    - key ids,
    - subject of email in thunderbird,
  - ▶ Bitcoin's Blockchain is public,
  - ▶ pivoting on these data with external sources yields interesting results.

2022-03-25

# AIL DESIGN OBJECTIVES

2022-03-25

Data mining Tor, social networks, OSINT with AIL Project

└ AIL design Objectives

AIL DESIGN OBJECTIVES

# OBJECTIVES OF THE SESSION

- Show how to use and extend an open source tool to monitor web pages, pastes, forums and hidden services
- Explain challenges and the design of the AIL open source framework
- Review different **collection mechanisms** and **sources**
- Learn how to create new modules
- Learn how to use, install and start AIL
- **Supporting investigation using the AIL framework** and including it in cyber threat intelligence lifecycle

2022-03-25

## Data mining Tor, social networks, OSINT with AIL Project

#### OBJECTIVES OF THE SESSION

- Show how to use and extend an open source tool to monitor web pages, pastes, forums and hidden services
- Explain challenges and the design of the AIL open source framework
- Review different **collection mechanisms** and **sources**
- Learn how to create new modules
- Learn how to use, install and start AIL
- **Supporting investigation using the AIL framework** and including it in cyber threat intelligence lifecycle

# AIL FRAMEWORK

2022-03-25

Data mining Tor, social networks, OSINT with AIL Project

└ AIL Framework

AIL FRAMEWORK

# FROM A REQUIREMENT TO A SOLUTION: AIL FRAMEWORK

## History:

- AIL initially started as an **internship project** (2014) to evaluate the feasibility to automate the analysis of (un)structured information to find leaks.
- In 2019, AIL framework is an **open source software** in Python. The software is actively used (and maintained) by CIRCL and many organisations.
- In 2020, AIL framework is now a complete project called **ail project**<sup>2</sup>.

<sup>2</sup><https://github.com/ail-project/>

# CAPABILITIES OVERVIEW

2022-03-25

Data mining Tor, social networks, OSINT with AIL Project

└ Capabilities Overview

CAPABILITIES OVERVIEW

- **Check** if mail/password/other sensitive information (terms tracked) leaked
- **Detect** reconnaissance of your infrastructure
- **Search** for leaks inside an archive
- **Monitor** and crawl websites

- Proactive investigation: leaks detection
  - ▶ List of emails and passwords
  - ▶ Leaked database
  - ▶ AWS Keys
  - ▶ Credit-cards
  - ▶ PGP private keys
  - ▶ Certificate private keys
- Feed Passive DNS or any passive collection system
- CVE and PoC of vulnerabilities most used by attackers

2022-03-25

Data mining Tor, social networks, OSINT with AIL Project

└ Capabilities Overview

└ Support CERT/CSIRTs and Law Enforcement

- Proactive investigation: leaks detection
  - ▶ List of emails and passwords
  - ▶ Leaked database
  - ▶ AWS Keys
  - ▶ Credit-cards
  - ▶ PGP private keys
  - ▶ Certificate private keys
- Feed Passive DNS or any passive collection system
- CVE and PoC of vulnerabilities most used by attackers

- Website monitoring
  - ▶ monitor booters
  - ▶ Detect encoded exploits (WebShell, malware encoded in Base64...)
  - ▶ SQL injections
- Automatic and manual submission to threat sharing and incident response platforms
  - ▶ MISP
  - ▶ TheHive
- Term/Regex/Yara monitoring for local companies/government

2022-03-25

Data mining Tor, social networks, OSINT with AIL Project

└ Capabilities Overview

└ Support CERT/CSIRTs and Law Enforcement

- Website monitoring
  - ▶ monitor booters
  - ▶ Detect encoded exploits (WebShell, malware encoded in Base64...)
  - ▶ SQL injections
- Automatic and manual submission to threat sharing and incident response platforms
  - ▶ MISP
  - ▶ TheHive
- Term/Regex/Yara monitoring for local companies/government

- Example: <https://gist.github.com/>
  - ▶ Easily storing and sharing text online
  - ▶ Used by programmers and legitimate users
    - Source code & information about configurations

### └ Capabilities Overview

### └ Sources of leaks: Paste monitoring

- Example: <https://gist.github.com/>
  - ▶ Easily storing and sharing text online
  - ▶ Used by programmers and legitimate users
    - Source code & information about configurations

- Example: <https://gist.github.com/>
  - ▶ Easily storing and sharing text online
  - ▶ Used by programmers and legitimate users
    - Source code & information about configurations
- Abused by attackers to store:
  - ▶ List of vulnerable/compromised sites
  - ▶ Software vulnerabilities (e.g. exploits)
  - ▶ Database dumps
    - User data
    - Credentials
    - Credit card details
  - ▶ More and more ...

# WHY SO MANY LEAKS?

- Economical interests (e.g. Adversaries promoting services)
- Ransom model (e.g. To publicly pressure the victims)
- Political motives (e.g. Adversaries showing off)
- Collaboration (e.g. Criminals need to collaborate)
- Operational infrastructure (e.g. malware exfiltrating information on a pastie website)
- Mistakes and errors

2022-03-25

## Data mining Tor, social networks, OSINT with AIL Project

### └ Capabilities Overview

#### └ Why so many leaks?

WHY SO MANY LEAKS?

- Economical interests (e.g. Adversaries promoting services)
- Ransom model (e.g. To publicly pressure the victims)
- Political motives (e.g. Adversaries showing off)
- Collaboration (e.g. Criminals need to collaborate)
- Operational infrastructure (e.g. malware exfiltrating information on a pastie website)
- Mistakes and errors

# ARE LEAKS FREQUENT?

Yes!

and we have to deal with this as a CSIRT.

- **Contacting companies or organisations** who did specific accidental leaks
- **Discussing with media** about specific case of leaks and how to make it more practical/factual for everyone
- Evaluating the economical market for cyber criminals (e.g. DDoS booters<sup>3</sup> or reselling personal information - reality versus media coverage)
- Analysing collateral effects of malware, software vulnerabilities or exfiltration

→ And it's important to detect them automatically.

<sup>3</sup><https://github.com/D4-project/>

# CURRENT CAPABILITIES

2022-03-25

Data mining Tor, social networks, OSINT with AIL  
Project  
└─ Current capabilities

CURRENT CAPABILITIES

- Extending AIL to add a new **analysis module** can be done in 50 lines of Python
- The framework **supports multi-processors/cores by default**. Any analysis module can be started multiple times to support faster processing during peak times or bulk import
- **Multiple** concurrent **data input**
- Tor Crawler (handle cookies authentication)

2022-03-25

- **Multiple** concurrent **data input**
- Tor Crawler (handle cookies authentication)

# AIL FRAMEWORK: CURRENT FEATURES

- Extracting **credit cards numbers, credentials, phone numbers, ...**
- Extracting and validating potential **hostnames**
- Keeps track of **duplicates**
- Submission to threat sharing and incident response platform (**MISP** and **TheHive**)
- **Full-text indexer** to index unstructured information
- **Tagging** for classification and searches
- Terms, sets, regex and YARA **tracking and occurrences**
- Archives, files and raw **submission** from the UI
- PGP, Cryptocurrency, Decoded (Base64, ...) and username Correlation
- And many more

API

2022-03-25

Data mining Tor, social networks, OSINT with AIL  
Project  
└ API

API

AIL exposes a ReST API which can be used to interact with the back-end<sup>10</sup>.

```
curl https://127.0.0.1:7000/api/v1/get/item/default
  --header "Authorization: iHc1_ChZxj1aXmiFiF1m"
  -H "Content-Type: application/json"
  --data @input.json -X POST
```

- AIL API is currently covering 60% of the functionality of back-end.

<sup>10</sup><https://github.com/ail-project/ail-framework/blob/master/doc/README.md>

SETTING UP THE FRAMEWORK

## Setting up AIL-Framework from source

```
1 git clone  
  https://github.com/ail-project/ail-framework.git  
2 cd AIL-framework  
3 ./installing_deps.sh
```

# FEEDING THE FRAMEWORK

2022-03-25

Data mining Tor, social networks, OSINT with AIL Project

└ Feeding the framework

FEEDING THE FRAMEWORK

There are different way to feed AIL with data:

1. Setup *pystemon* and use the custom feeder
  - ▶ *pystemon* will collect items for you
2. Use the new JSON Feeder (twitter)
3. Feed your own data using the API or the `import_dir.py` script
4. Feed your own file/text using the UI (Submit section)
