FROM EVIDENCES TO ACTIONABLE INFORMATION

E-206

CIRCL COMPUTER INCIDENT RESPONSE CENTER LUXEMBOURG

MISP PROJECT  
<https://www.misp-project.org/>

MARCH 23, 2022

- How evidences can be useful for defense
- Why is contextualisation important
- What options do we have in MISF
- Best practises to encode and contextualise
- How can context be leveraged
- How to structure non-technical information
  - ▶ Practical case: Conti analysis

2022-03-23

From evidences to actionable information

## Objectives of this module

- How evidences can be useful for defense
- Why is contextualisation important
- What options do we have in MISF
- Best practises to encode and contextualise
- How can context be leveraged
- How to structure non-technical information
  - ▶ Practical case: Conti analysis

# HOW EVIDENCES CAN BE USEFUL FOR DEFENSE

2022-03-23

From evidences to actionable information  
└─ How evidences can be useful for defense

HOW EVIDENCES CAN BE USEFUL FOR  
DEFENSE

The most common recommendations to protect people and assets from cyber attacks are usually:

1. Maintaining softwares up to date
2. Staff awareness
3. Reliable Backups
4. Endpoints protection tools (IDS or SIEM)

2022-03-23

From evidences to actionable information  
└─ How evidences can be useful for defense

└─ How evidences can be useful for defense

1. An Intrusion Detection System (IDS) is a tool that aims at detecting vulnerability exploits or suspicious activity against a server or a service.
2. A Security Information and Event Management (SIEM) allows centralise security alerts and events generated by endpoints and network devices.

The most common recommendations to protect people and assets from cyber attacks are usually:  
1. Maintaining softwares up to date  
2. Staff awareness  
3. Reliable Backups  
4. Endpoints protection tools (IDS or SIEM)

# HOW EVIDENCES CAN BE USEFUL FOR DEFENSE

- We can only help endpoints protection tools
- With the proper knowledge and methods, it is possible the maximize their accuracy and performance

These systems can rely on information extracted from

- Log files
- Network captures
- Disk forensic
- ...

However, from a MISP user perspective the hardest part in not to encode the raw evidences, it is to encode them so that they become **actionable**

From evidences to actionable information  
└─ How evidences can be useful for defense

└─ How evidences can be useful for defense

# WHY IS CONTEXTUALISATION IMPORTANT

2022-03-23

From evidences to actionable information  
└ Why is contextualisation important

WHY IS CONTEXTUALISATION IMPORTANT

# WHY IS CONTEXTUALISATION IMPORTANT

- Allow the distinction between information of interest and raw data
- provide guidance on how to use this information can be used for for protection
- Filter out noise from information unrelated from the use-case or activity
- Enable risk assessment based on attack type, TTP and threat actor
- Allow triage in large volume of data
- Allow false-positive management

2022-03-23

From evidences to actionable information

└ Why is contextualisation important

└ Why is contextualisation important

1. Tactics, Techniques and Procedures (TTP) describe the context and a detailed description of the behavior taken by an actor

WHY IS CONTEXTUALISATION IMPORTANT

- Allow the distinction between information of interest and raw data
- provide guidance on how to use this information can be used for for protection
- Filter out noise from information unrelated from the use-case or activity
- Enable risk assessment based on attack type, TTP and threat actor
- Allow triage in large volume of data
- Allow false-positive management

## Most common expectations of recipients when receiving information

- Being able to **consume** the data
- Find information is **relevant** for them and their partners
- Being able to **understand** the data and its classification
- Assess the **credibility**, likelihood and origin of the data

Most common expectations of recipients for handling the data

- Being able to **filter** data efficiently for different use-cases
- Obtain as much **knowledge** out of the data as possible
- Know how this data was produced and where its **origin**
- Deduce why is the data **relevant** for them and how **critical** it is

2022-03-23

From evidences to actionable information

└ Why is contextualisation important

└ What do recipient hope to do with the data

Most common expectations of recipients for handling the data

- Being able to **filter** data efficiently for different use-cases
- Obtain as much **knowledge** out of the data as possible
- Know how this data was produced and where its **origin**
- Deduce why is the data **relevant** for them and how **critical** it is

# IS CONTEXT REALLY THAT IMPORTANT?

- Raw data **is** useful but useless if you don't know what it is about
- That's why it should carry how and why it's relevant

```
1 1.2.3.9
2 137.221.106.104
3 28c643a1f69f9fca9481a4bc9f3f38f3
4 904afe59f6438848be96fd26fdeab01267070d25
5 evil.org
6 accounting.xlsx.exe
7 cat.jpg.exe
```

- In MISP, all data intrinsically have some context
  - ▶ **Type:** ip-src / sha1 / domain
  - ▶ **Category:** network-activity / payload-delivery / external-analysis
  - ▶ **to\_ids:** yes / no

2022-03-23

From evidences to actionable information

└ Why is contextualisation important

└ Is context really that important?

1. The 'to\_ids' flag is used to differentiate between indicators and supporting data. If the flag is set, it means the attribute is an indicator and is meant for protective tools.

IS CONTEXT REALLY THAT IMPORTANT?

- Raw data is useful but useless if you don't know what it is about
- That's why it should carry how and why it's relevant

```
{
  "id": 1,
  "type": "ip-src",
  "category": "network-activity",
  "to_ids": true,
  "value": "1.2.3.9"
}, {
  "id": 2,
  "type": "sha1",
  "category": "payload-delivery",
  "to_ids": false,
  "value": "28c643a1f69f9fca9481a4bc9f3f38f3"
}, {
  "id": 3,
  "type": "domain",
  "category": "external-analysis",
  "to_ids": true,
  "value": "evil.org"
}, {
  "id": 4,
  "type": "file",
  "category": "payload-delivery",
  "to_ids": true,
  "value": "accounting.xlsx.exe"
}, {
  "id": 5,
  "type": "file",
  "category": "payload-delivery",
  "to_ids": true,
  "value": "cat.jpg.exe"
}
```

- In MISP, all data intrinsically have some context
  - ▶ **Type:** ip-src / sha1 / domain
  - ▶ **Category:** network-activity / payload-delivery / external-analysis
  - ▶ **to\_ids:** yes / no

# IS CONTEXT REALLY THAT IMPORTANT?

- Sometime, more contextual information is not needed as data inherently convey its context:
  - ▶ Tor exit nodes
  - ▶ Botnet / C2 trackers
  - ▶ Ransomwares' bitcoin addresses
  - ▶ ...
- But most of the time, **context is essential**

2022-03-23

From evidences to actionable information

└ Why is contextualisation important

└ Is context really that important?

IS CONTEXT REALLY THAT IMPORTANT?

- Sometime, more contextual information is not needed as data inherently convey its context:
  - ▶ Tor exit nodes
  - ▶ Botnet / C2 trackers
  - ▶ Ransomwares' bitcoin addresses
  - ▶ ...
- But most of the time, **context is essential**

# WHAT SORT OF CONTEXT IS PERTINENT

- To what kind of user this data is for
- What type of action can be performed with it
- Estimation on accuracy, reliability and likelihood
- What are the impacts
- For threat actors:
  - ▶ Who is it? What tools were used?
  - ▶ What are their motivations? Who are their targets?
- How can we prevent/detect/block/remediate the attack

2022-03-23

From evidences to actionable information

└ Why is contextualisation important

└ What sort of context is pertinent

- To what kind of user this data is for
- What type of action can be performed with it

# WHAT OPTIONS DO WE HAVE IN MISP

2022-03-23

From evidences to actionable information

└─What options do we have in MISP

WHAT OPTIONS DO WE HAVE IN MISP

MISP offers multiples means to contextualise

- Taxonomies
- Galaxies and Galaxy Clusters
- MITRE ATT&CK
- MISP Objects and relationships
- Sightings and `first_seen` / `last_seen`

Let's have an overview of each of them

From evidences to actionable information

└─What options do we have in MISP

└─What options do we have in MISP

- Simple labels **standardised** on vocabularies
- Taxonomy tags often **self-explanatory**
  - ▶ workflow:state="draft"
  - ▶ doesn't need more explanation
- Triple tag system: namespace:predicate="value"
- Different organisational/community cultures require different nomenclatures
  - ▶ JSON libraries that can easily be defined without the involment of the MISP-project team

<input type="checkbox"/> Tag	Events	Attributes	Tags
<input type="checkbox"/> workflow:state="complete"	11	0	workflow:state="complete" 🔗
<input type="checkbox"/> workflow:state="draft"	0	0	workflow:state="draft" 🔗
<input type="checkbox"/> workflow:state="incomplete"	55	10	workflow:state="incomplete" 🔗
<input type="checkbox"/> workflow:state="ongoing"	0	0	workflow:state="ongoing" 🔗

- Galaxy: Container to group galaxy clusters of the same type
- Galaxy Cluster: knowledge-base item with complex meta-data aimed for human consumption
- Community driven **knowledge-base libraries used as tags**
- Including descriptions, links, synonyms, meta information, etc.
- **Flexible and reusable**
- Works the exact same way as taxonomies but with more **meta-data**
  - ▶ `misp-galaxy:ransomware="CryptoLocker"`
  - ▶ Contains description, reference, documentation and other meta-data

└─What options do we have in MISP

└─Galaxies and Galaxy Clusters

- MITRE ATT&CK is one of the best knowledge base of **adversary TTPs**
- **Widely used** and supported by a lot of tools
- The catalogue includes a **matrix-like** interface
- Offers clear visualisation for the kill chain
  
- MISP Fully support ATT&CK and embraced it's matrix structure
- Multiples matrices for other concerns are available:
  - ▶ Badhra: Similar to ATT&CK but for telecom operators
  - ▶ attck4fraud: Regrouped clusters related to fraud actions

└─What options do we have in MISP

└─MITRE ATT&CK and Galaxy Matrices

1. The kill chain are the sequential steps that adversaries can perform in order to achieve an attack

- MITRE ATT&CK is one of the best knowledge base of adversary TTPs
- **Widely used** and supported by a lot of tools
- The catalogue includes a **matrix-like** interface
- Offers clear visualisation for the kill chain
  
- MISP Fully support ATT&CK and embraced it's matrix structure
- Multiples matrices for other concerns are available:
  - ▶ Badhra: Similar to ATT&CK but for telecom operators
  - ▶ attck4fraud: Regrouped clusters related to fraud actions

Atomic attributes are great, but are lacking a way to express that some can be related to others.

MISP Objects are there to fill the gap:

- **Template system** to build complex structures composed of attributes
- Logically **group attributes** that are contextually linked between each others
  - ▶ A *file* object can contain: a size, name, content, cryptographic hashes, etc.
  - ▶ A *car* object can contain: a brand, a model, a license plate, etc.

└─What options do we have in MISP

└─MISP Objects

2022-03-23

From evidences to actionable information

What options do we have in MISP

MISP Objects

- Analysts want more than a table of attribute, they want to see how each of them **interact** with the others
- Relationships are essentials to describe scenarios or stories with the data
- MISP allow these relationship to be built between objects

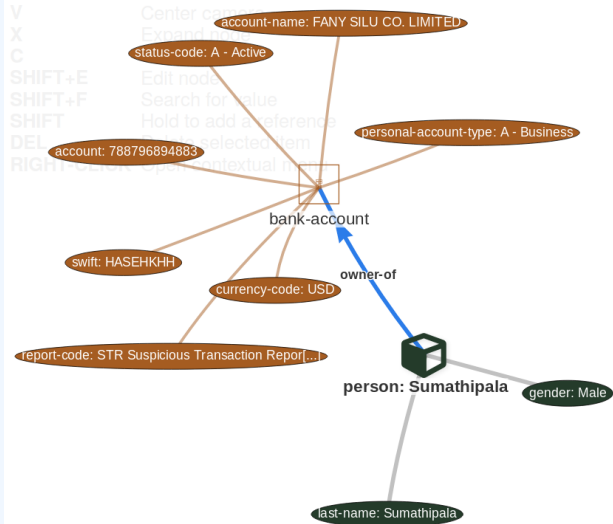

└─What options do we have in MISP

└─Relationships

- Analysts want more than a table of attribute, they want to see how each of them **interact** with the others
- Relationships are essentials to describe scenarios or stories with the data
- MISP allow these relationship to be built between objects

# RELATIONSHIPS

## A relationship between a person and its bank account

## From evidences to actionable information

└ What options do we have in MISP

└ Relationships

# TIMELINESS WITH SIGHTINGS AND `first_seen` / `last_seen`

Adding **Temporality** is a good way to avoid having the data frozen in time

## ■ Sightings

- ▶ Allows to signal the fact that an indicator was **sighted**
- ▶ They can record the time and where they were the sighting was seen
- ▶ E.g.: Sight C2 servers or phishing websites

## ■ `first_seen` / `last_seen`

- ▶ These two data-points allow to set when the specified item was first and last seen
- ▶ Enables the visualisation of data timeframe with a timeline
- ▶ *e.g: Track the duration of a campaign or duration for which something was online*

2022-03-23

From evidences to actionable information

└─What options do we have in MISP

└─Timeliness with Sightings and `first_seen` / `last_seen`

TIMELINESS WITH SIGHTINGS AND `first_seen` / `last_seen`

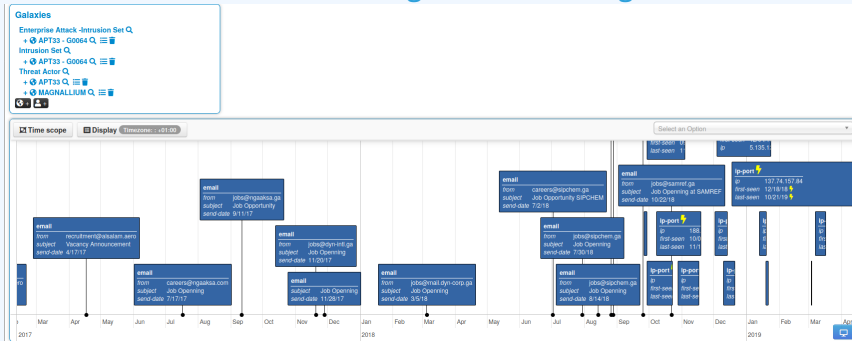

Adding **Temporality** is a good way to avoid having the data frozen in time

- Sightings

# BEST PRACTISES TO ENCODE AND CONTEXTUALISE

2022-03-23

From evidences to actionable information  
└ Best practises to encode and contextualise

BEST PRACTISES TO ENCODE AND CONTEXTUALISE

Always keep in mind that the recipient is a human:

- Include a self-explanatory title
- Make it concise
- Include a report along with the machine parsable data
  - It can either be included as an attribute or as an event-report

It will make the live of the analyst easier: That analyst might end up being you!

From evidences to actionable information  
└ Best practises to encode and contextualise

└ Encoding: Event

Always keep in mind that the recipient is a human:

- Include a self-explanatory title
  - Make it concise
  - Include a report along with the machine parsable data
    - It can either be included as an attribute or as an event-report
- It will make the live of the analyst easier: That analyst might end up being you!

Prefer the use of object rather than attributes for attributes intrinsically linked together.

Atomic data by themselves rarely exist: They are often related to something else

- Interactions between elements are frequent
  - ▶ They can often be described by using verbs: connects-to, contain-within, ...
- A story can be inferred without the need to put it into words
  - ▶ *"file was attached to email which when extracted contained a malware connecting to ip-address which was used C2"*
- Properly encoding these relationships turns flat data into a **connected graph**

From evidences to actionable information  
└ Best practises to encode and contextualise  
└ Encoding: Attributes and objects

Prefer the use of object rather than attributes for attributes intrinsically linked together.

Atomic data by themselves rarely exist: They are often related to something else

- Interactions between elements are frequent
  - ▶ They can often be described by using verbs: connects-to, contain-within, ...
- A story can be inferred without the need to put it into words
  - ▶ *"file was attached to email which when extracted contained a malware connecting to ip-address which was used C2"*
- Properly encoding these relationships turns flat data into a **connected graph**

# CONTEXTUALISATION: DISTRIBUTIONS AND PERMISSIBLE ACTIONS

Adding context on **what** actions can be done on the data and **who** can it be shared with

## ■ Permissible actions taxonomies:

- ▶ *PAP*: Permissible Actions Protocol
- ▶ *IEPF*: Information Exchange Policy (IEP) Framework
- ▶ *pap:white* No restrictions in using this information

## ■ Sharing level taxonomies:

- ▶ *TLP*: Traffic Light Protocol
- ▶ *IEPF*: Information Exchange Policy (IEP) Framework
- ▶ *tlp:green*: Limited disclosure, restricted to the community

2022-03-23

From evidences to actionable information  
└ Best practises to encode and contextualise

  - ▶ *IEPF*: Information Exchange Policy (IEP) Framework
  - ▶ *pap:white* No restrictions in using this information
- Sharing level taxonomies:
  - ▶ *TLP*: Traffic Light Protocol
  - ▶ *IEPF*: Information Exchange Policy (IEP) Framework
  - ▶ *tlp:green*: Limited disclosure, restricted to the community

- Each data point has a meaning and tells a part of the story
- One should try to capture the answer to these question when contextualising:
  - ▶ In what context was this IoC seen?
  - ▶ Is it related to compromision? Does it tell us anything about the adversary infrastructure?
  - ▶ Was it used to exfiltrate data? Did it acted as a C2?
  - ▶ Did it perform subsequent actions?
  - ▶ ATT&CK can procure even more knowledge

- └ Best practises to encode and contextualise
- └ Contextualisation: Attributes and their context

- Each data point has a meaning and tells a part of the story
- One should try to capture the answer to these question when contextualising:
  - ▶ In what context was this IoC seen?
  - ▶ Is it related to compromision? Does it tell us anything about the adversary infrastructure?
  - ▶ Was it used to exfiltrate data? Did it acted as a C2?
  - ▶ Did it perform subsequent actions?
  - ▶ ATT&CK can procure even more knowledge

However, think twice before tagging:

- If a tag applies to the whole content of the event, it should be attached on the event instead
- If the tag offers no real utility or hinder your ability to analyse the whole dataset, it should probably be ignored

From evidences to actionable information

└ Best practises to encode and contextualise

└ Contextualisation: Attributes and their context

However, think twice before tagging:

  - ▶ *i.e: estimative-language:likelihood-probability="very likely"*

- The purpose is not to blame but to identify the attacker's **intent**
- Knowing the intent greatly help to:
  - ▶ Know the objectives
  - ▶ Understand what are the targeted assets
  - ▶ Deduce the treat level
- It allows to identity behaviors
  - ▶ Might speed up the next investigation
  - ▶ Might bootstrap the analysis procdess

└ Best practises to encode and contextualise

└ Contextualisation: Make the attribution

- The purpose is not to blame but to identify the attacker's **intent**
- Knowing the intent greatly help to:
  - ▶ Know the objectives
  - ▶ Understand what are the targeted assets
  - ▶ Deduce the treat level
- It allows to identify behaviors
  - ▶ Might speed up the next investigation
  - ▶ Might bootstrap the analysis procdess

# CONTEXTUALISE: PROVIDE ADVICES ON HOW TO PROTECT THEMSELVES

To help recipients to better protect themselves, additional information can be provided.

- Indicate what can be done with the data
  - ▶ Use it to feed an IDS
  - ▶ Perform historical search with a SIEM to find a potential compromise
  - ▶ Inform your peers against a new type of threat
- Provide additional supporting materials
  - ▶ The original report form which the data is coming from
  - ▶ Home-brew scripts
  - ▶ Sigma rules for SIEM searches
  - ▶ Context and configurations under which the analysis was done

2022-03-23

From evidences to actionable information

# HOW CAN CONTEXT BE LEVERAGED

2022-03-23

From evidences to actionable information  
└─ How can context be leveraged

HOW CAN CONTEXT BE LEVERAGED

Let's make use of this well-structured, context-rich data

- Incorporate all contextualisation options into API filters

```
1 {  
2   "AND": [  
3     "admiralty-scale:source-reliability=\"Reliable\""  
4   ],  
5   "OR": [  
6     "threat-actor=\"Sofacy\"",  
7     "sector=\"Chemical\"",  
8     "country=\"Luxembourg\"",  
9   ]  
10 }
```

From evidences to actionable information

└─ How can context be leveraged

└─ Leveraging the context

Let's make use of this well-structured, context-rich data

- Incorporate all contextualisation options into API filters

```
{  
  "AND": [  
    "admiralty-scale:source-reliability=\"Reliable\""  
  ],  
  "OR": [  
    "threat-actor=\"Sofacy\"",  
    "sector=\"Chemical\"",  
    "country=\"Luxembourg\"",  
  ]  
}
```

# LEVERAGING THE CONTEXT

- On-demande potential false positive exclusion
- Warninglist system helps to exclude known false-positives reducing alert-fatigue

# HOW TO STRUCTURE NON-TECHNICAL INFORMATION

2022-03-23

From evidences to actionable information  
└─ How to structure non-technical information

HOW TO STRUCTURE NON-TECHNICAL  
INFORMATION

- Identify non-technical data that can be useful for an investigation,
- Illustrate how non-technical and technical data can interact to produce meaningful insights,
- Model these interactions,
- Outline what Socio-Technical interactions are useful to share.

## From evidences to actionable information

- └ How to structure non-technical information
  - └ Objectives

### 1. A note for the slide handout

- Identify non-technical data that can be useful for an investigation,
- Illustrate how non-technical and technical data can interact to produce meaningful insights,
- Model these interactions,
- Outline what Socio-Technical interactions are useful to share.

Computer and their security is linked to human activities:

- Technical traces show human activities,
- Technical traces can convey human intent,
- Human interactions can explain and give context to Technical traces,
- CyberCrime requires infrastructures and logistics that are discussed between humans,
- TTPS are discussed and exchanged,
- Human interaction can help attributing attacks to threat actors,
- Human interaction can help deciphering intent and motives, and discriminate human error from sabotage.

From evidences to actionable information  
└─ How to structure non-technical information  
└─ We live in Socio-Technical Systems

Use OSINT and data leaks to:

- bring context to other ransomware cases,
- better understand the gang day to day operations,
- get insights on events' timeline,
- confirm or invalidat previous hypotheses,
- select relevant information to share and produce an intelligence report.

#### └─ Plan

#### 1. A note for the slide handout

Use OSINT and data leaks to:

- bring context to other ransomware cases,
- better understand the gang day to day operations,
- get insights on events' timeline,
- confirm or invalidat previous hypotheses,
- select relevant information to share and produce an intelligence report.

└ Ransomware Jabber chats leak

We use AIL<sup>1</sup> to dig into the data:

- AIL processes the data and search for relevant information
  - ▶ PGP keys,
  - ▶ Bitcoin addresses, maybe others,
  - ▶ onion hidden services,
  - ▶ IP addresses.
- Once we find relevant information we push it into MISP,
- we use MISP correlation engine to find relevant past cases.

<sup>1</sup><https://ail-project.org/>

└ Conti ransomware group leak analysis

└ Ransomware Jabber chats leak in AIL

1. It is important to understand what we search for before digging into the data with AIL.
2. Gang may discuss payments, so we are interested in crypto currencies
3. Gang may discuss IP addresses and infrastructure, etc.
4. For the training, we use a dedicated AIL container that contains RAW translated jabber chats.

We use AIL<sup>1</sup> to dig into the data:

- AIL processes the data and search for relevant information
  - ▶ PGP keys,
  - ▶ Bitcoin addresses, maybe others,
  - ▶ onion hidden services,
  - ▶ IP addresses.
- Once we find relevant information we push it into MISP,
- we use MISP correlation engine to find relevant past cases.

<sup>1</sup><https://ail-project.org/>

## We use pyail to feed conti ransomware logs into AIL

```
1 from pyail import PyAIL
2 #... imports
3 #... setup code
4 for content in sys.stdin:
5     elm = json.loads(content)
6     tmp = elm['body']
7     tmpmt = {}
8     tmpmt['jabber:to'] = elm['to']
9     tmpmt['jabber:from'] = elm['from']
10    tmpmt['jabber:ts'] = elm['ts']
11    tmpmt['jabber:id'] = "{}".format(uuid.uuid4())
12    pyail.feed_json_item(tmp, tmpmt, ailfeedertype,
        source_uuid)
```

```
1 $ cat ~/conti/* | jq . -c | python ./feeder.py
```

2022-03-23

```

# RANSOMWARE JABBER CHATS LEAK IN AIL

AIL allows to explore the data set

2022-03-23

From evidences to actionable information

- └ Conti ransomware group leak analysis
- └ Ransomware Jabber chats leak in AIL

1. For this particulare account, we see inteactions with various accounts,
2. as well as the exchange of the PGP key.

First we quickly extract at most 1000 bitcoin addresses without context:

```
1 $ . ~/AILENV/bin/activate
2 $ python ~/ail-framework/tools/
  extract_cryptocurrency.py -t bitcoin -n
  1000 | jq .[].nodes[].text | tr -d '"'
```

2022-03-23

From evidences to actionable information

└ Conti ransomware group leak analysis

└ Correlating with MISP's data

1. The script extracts the bitcoin addresses from AIL,
2. we use jq to select the right bit of data,
3. we trim the unnecessary quotes with tr.

# CORRELATING WITH MISP'S DATA

We use MISP's free text import feature to populate a new event:

2022-03-23

From evidences to actionable information  
└ Conti ransomware group leak analysis  
  
└ Correlating with MISP's data

1. MISP allows to verify for each field is it detected the right type of attribute.

## MIPS links one related event

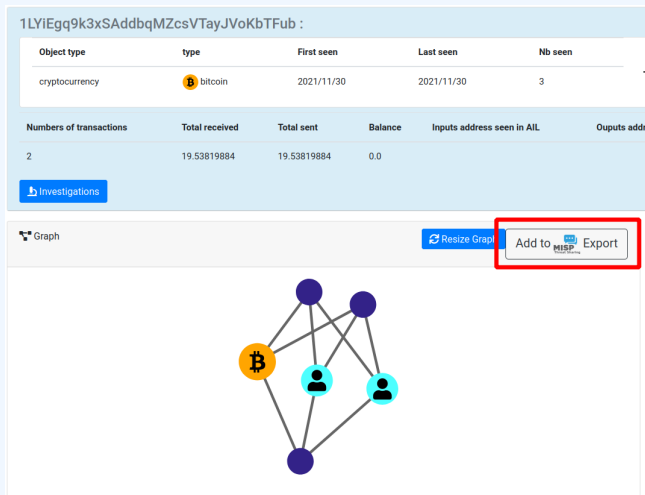

- Conti ransomware group leak analysis
  - Correlating with MISP's data

1. MISP automatically match various attributes between events,
2. In this case, one bitcoin address was spotted in another event.

# CORRELATING WITH MISP'S DATA

To add some contextual information about attackers' social interactions we go back to AIL:

2022-03-23

From evidences to actionable information

- Conti ransomware group leak analysis
  - Correlating with MISP's data

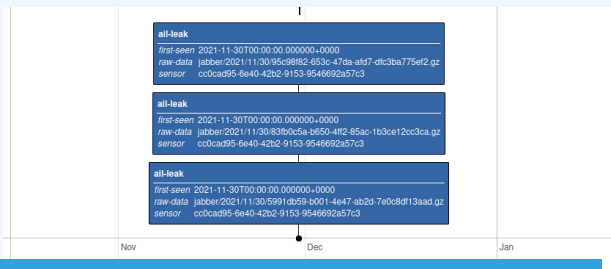

1. This bitcoin address appeared in three interactions (AIL items), between two individuals.
2. We use the "Add to MISP export" button to export this bitcoin address to MISP.
3. When prompted by AIL we choose to export the address on two levels to reach usernames:
4. Bitcoin address -> items -> usernames

# CORRELATING WITH MISP'S DATA

In MISP's event graph, we can now see objects' relationships:

As well as the interactions' timeline

We gathered new information:

- We confirmed that the ransomware gang is indeed Conti,
- we know the amount of money claimed by the attacker.

We will pack this information in a digestible package:

- We extend the existing event with the event created from AIL,
- we create an Event Report that explains the context and the new intelligence produced from the additional facts we gathered with AIL.

We gathered new information:

- We confirmed that the ransomware gang is indeed Conti,

Submit

2022-03-23

From evidences to actionable information

- Conti ransomware group leak analysis
- Producing Intelligence

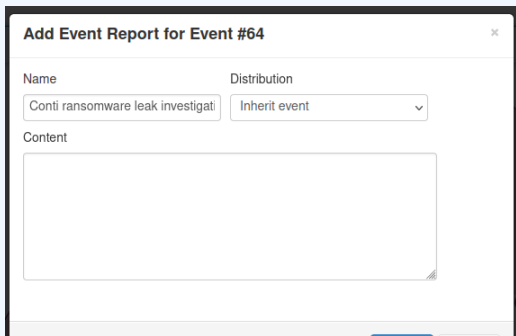

1. We extend the event that contains the ransomware case with the one we created in AIL by adding the first event's uuid in the latter "Extends Event" property.
2. Once the event is exented by another, one can switch between the "atomic view" and the "extended view" by clicking the arrows in the "Extended By" event property box.

# PRODUCING INTELLIGENCE

We create an event report in the extending event to:

- explain the context around the leak,
- explain how the leak was exploited,
- describe the analyses that was done,
- show how the data from the leak shines a new light on the first event,
- explain to humans.

The screenshot shows a web form titled "Add Event Report for Event #64". It has a close button (X) in the top right corner. The form contains three main sections: "Name" with a text input field containing "Conti ransomware leak investigati", "Distribution" with a dropdown menu showing "Inherit event", and "Content" with a large text area.

2022-03-23

From evidences to actionable information

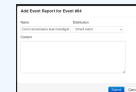

└ Conti ransomware group leak analysis

└ Producing Intelligence

1.

We create an event report in the extending event to:

- explain the context around the leak,
- explain how the leak was exploited,
- describe the analyses that was done,
- show how the data from the leak shines a new light on the first event,
- explain to humans.

A small thumbnail version of the form shown in the previous block, titled "Add Event Report for Event #64".

Writing the story around the event fosters to addition of more contextual information:

## Background

On Feb. 27th 2022, information popped up on the Internet that a disgruntled UA operator from Conti ransomware gang was about to leak information about their operations in the coming hours on his twitter account [twitter-id: ContiLeaks](#) . External analysis brings more details into this investigation [url: https://analyst1.com/file-assets/RANSOM-MAFIA-...](https://analyst1.com/file-assets/RANSOM-MAFIA-...)

## Cryptocurrencies wallet used for moving money

When the french organization got ransomed, Conti asked for an undisclosed amount of money to be transefered on [btc: 1LYIEgq9k3xSAddbqMZcsVTayJVokbTFub](#) . The leak brought new information in the form of jabber chats between Contrl ransomware opearators [person: 2](#) and the french org, we know now that Conti asked for \$1,150,000.

## Analysis

The analysis has been done using AIL.

2022-03-23

From evidences to actionable information

└ Conti ransomware group leak analysis

└ Producing Intelligence

1. Here we only added a twitter account, but numerous information could be added to the event to create a meaningful report.

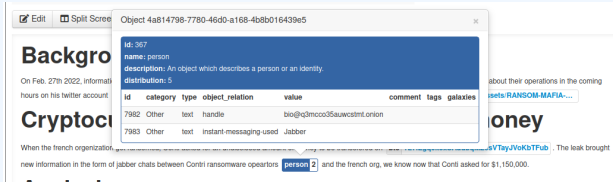

Writing the story around the event fosters to addition of more contextual information:

### Background

### Cryptocurrencies wallet used for moving money

### Analysis

Event reports are supported by the data contained into the event, and as such allows for getting more information on clicking on the object from the report:

└ Conti ransomware group leak analysis

└ Producing Intelligence

1. In this view we click on a person object to get more details about it.

Event reports are supported by the data contained into the event, and as such allows for getting more information on clicking on the object from the report:

- Given the growth and diversification and maturity of users, **contextualisation is becoming essential**
- Well-structured, context-rich data is good as it enables better **decision making**
- It will rise user capabilities and thus **improve protection**
- MISP has a format and tools designed to support contextualised data

└ Conti ransomware group leak analysis

└ To sum it all up

- Given the growth and diversification and maturity of users, **contextualisation is becoming essential**
- Well-structured, context-rich data is good as it enables better **decision making**
- It will rise user capabilities and thus **improve protection**
- MISP has a format and tools designed to support contextualised data
