MAPPING INVESTIGATIONS AND CASES  
IN MISP

E.205

CIRCL COMPUTER INCIDENT RESPONSE CENTER LUXEMBOURG

MISP PROJECT  
<https://www.misp-project.org/>

MARCH 25, 2022 - VO.7

# OBJECTIVES OF THIS MODULE

- Recap on MISP data model and distribution levels
- Data from cases to be structured and encoded:
  - ▶ **Network indicators:** ip, domain, url, ...
  - ▶ **Files and binaries:** non-malicious / malicious payload
  - ▶ **Emails:** content, header, attachment, ...
  - ▶ **Web:** URL, cookies, x509
  - ▶ **Cryptographic materials:** public / private key, certificate
  - ▶ **Infrastructure and devices**
  - ▶ **Financial fraud:** bank-account, phone-number, btc
  - ▶ **Person:** name, online accounts, passport, visa
  - ▶ **Support tools:** yara, detection/remediation scripts
  - ▶ **Vulnerabilities:** cve
  - ▶ **External analysis:** Reports, blogpost, ransome notes
- Relationships and timeliness
- Enrichments via module and correlation
- Preparing data for sharing with other LE partners, CSIRT, SOC

2022-03-25

# MISP DATA MODEL AND DISTRIBUTION LEVELS

2022-03-25

Mapping investigations and cases in MISP  
└─ MISP Data model and distribution levels

MISP DATA MODEL AND DISTRIBUTION  
LEVELS

## Event

*Encapsulations for contextually linked information.*

**Purpose:** Group datapoints and context together. Acting as an envelop, it allows setting distribution and sharing rules for itself and its children.

**Usecase:** Encode incidents/events/reports/...

- events can contain other elements such as attributes, objects and eventreports.
- The distribution level and any context added on an event (such as taxonomies) are propagated to its underlying data.

2022-03-25

Mapping investigations and cases in MISP

└ MISP Data model and distribution levels

└ MISP Event

## Event

*Encapsulations for contextually linked information.*

**Purpose:** Group datapoints and context together. Acting as an envelop, it allows setting distribution and sharing rules for itself and its children.

**Usecase:** Encode incidents/events/reports/...

- events can contain other elements such as attributes, objects and eventreports.
- The distribution level and any context added on an event (such as taxonomies) are propagated to its underlying data.

## Attribute

*Basic building block to share information.*

**Purpose:** Individual data point. Can be an indicator or supporting data.

**Usecase:** Domain, IP, link, sha1, attachment, ...

- ▶ attributes cannot be duplicated inside the same event and can have sightings.
- ▶ The difference between an indicator or supporting data is usually indicated by the state of the attribute's to\_ids flag.

## Mapping investigations and cases in MISP

└ MISP Data model and distribution levels

└ MISP Attribute

### Attribute

Basic building block to share information.

**Purpose:** Individual data point. Can be an indicator or supporting data.

**Usecase:** Domain, IP, link, sha1, attachment, ...

▶ attributes cannot be duplicated inside the same event and can have sightings.

▶ The difference between an indicator or supporting data is usually indicated by the state of the attribute's to\_ids flag.

## MISP Object

*Advanced building block providing attribute compositions via templates.*

**Purpose:** Groups attributes that are intrinsically linked together.

**Usecase:** File, person, credit-card, x509, device, ...

► objects have their attribute compositions described in their respective template. They are instantiated with attributes and can reference other attributes or objects.

► MISP is not required to know the template to save and display the object. However, *edits* will not be possible as the template to validate against is unknown.

2022-03-25

Mapping investigations and cases in MISP

└ MISP Data model and distribution levels

└ MISP Object

MISP Object

Advanced building block providing attribute compositions via templates.

**Purpose:** Groups attributes that are intrinsically linked together.

**Usecase:** File, person, credit-card, x509, device, ...

► objects have their attribute compositions described in their respective template. They are instantiated with attributes and can reference other attributes or objects.

► MISP is not required to know the template to save and display the object. However, edits will not be possible as the template to validate against is unknown.

## Object Reference

*Relationships between individual building blocks.*

**Purpose:** Allows to create relationships between entities, thus creating a graph where they are the edges and entities are the nodes.

**Usecase:** Represent behaviours, similarities, affiliation, ...

► references can have a textual relationship which can come from MISP or be set freely.

2022-03-25

Mapping investigations and cases in MISP

└ MISP Data model and distribution levels

└ MISP Relationships (aka object reference)

### Object Reference

Relationships between individual building blocks.

**Purpose:** Allows to create relationships between entities, thus creating a graph where they are the edges and entities are the nodes.

**Usecase:** Represent behaviours, similarities, affiliation, ...  
► references can have a textual relationship which can come from MISP or be set freely.

## Event Report

*Advanced building block containing formatted text.*

**Purpose:** Supporting data point to describe events or processes.

**Usecase:** Encode reports, provide more information about the event, ...

► Event reports are markdown-aware and include a special syntax to reference data points or context.

2022-03-25

Mapping investigations and cases in MISP  
└ MISP Data model and distribution levels  
└ MISP Event report

### Event Report

Advanced building block containing formatted text.

**Purpose:** Supporting data point to describe events or processes.

**Usecase:** Encode reports, provide more information about the event, ...

► Event reports are markdown-aware and include a special syntax to reference data points or context.

Which structure should be used when encoding data?

## ■ Attribute vs Object

- ▶ If the value is contextually linked to another element or is a subpart of a higher concept, an **object** should be used
- ▶ If the value is part of a large list of atomic data, an **attribute** should be used

## ■ Annotation Object vs Event Report

- ▶ If it is possible to encode the text (raw text or markdown), an **event report** is preferred
- ▶ If the text is written in a specific format (e.g pdf, docx), an **annotation object** should be used

Mapping investigations and cases in MISP  
└ MISP Data model and distribution levels  
  
└ General rule of thumb

Which structure should be used when encoding data?

### ■ Attribute vs Object

- ▶ If the value is contextually linked to another element or is a subpart of a higher concept, an **object** should be used
- ▶ If the value is part of a large list of atomic data, an **attribute** should be used

### ■ Annotation Object vs Event Report

- ▶ If it is possible to encode the text (raw text or markdown), an **event report** is preferred
- ▶ If the text is written in a specific format (e.g pdf, docx), an **annotation object** should be used

# CASE STUDY 1: SCAM CALL

12:25:04 UTC+0: Victim executed the money transfer  
2022-03-25 08:39:21 UTC+0: Victim contacted police

## Collected evidences

- ▶ RDP Log file
- ▶ installed binary
- ▶ victim's browser history
- ▶ bank account statement
- ▶ victim's phone call log

## Data extracted from evidences

- ▶ Scammer's **ip address**
- ▶ Potentially **malicious binary**
- ▶ **URL** (and **domain**) from which the binary was downloaded
- ▶ Scammer's **bank account** and **phone number**
- ▶ Scammer's full name and nationality

### Collected evidences

- ▶ RDP Log file
- ▶ installed binary
- ▶ victim's browser history
- ▶ bank account statement
- ▶ victim's phone call log

### Data extracted from evidences

- ▶ Scammer's **ip address**
- ▶ Potentially **malicious binary**
- ▶ **URL** (and **domain**) from which the binary was downloaded
- ▶ Scammer's **bank account** and **phone number**
- ▶ Scammer's full name and nationality

## Extracted values

- ▶ 194.78.89.250
  - ip-address from log file
- ▶ bin.exe
  - downloaded binary
- ▶ https://zdgyot.ugicok.ru/assets/bin.exe
  - download URL
- ▶ GB 29 NWBK 601613 31926819
  - IBAN number
  - Swift: NWBK, Account number: 31926819, Currency: GBP
- ▶ +12243359185
  - phone number
- ▶ Wallace Breen is from GB
  - name and nationality

└ Case study 1: Scam call

- ▶ Wallace Breen is from GB
  - name and nationality

# CASE STUDY 1: SCAM CALL

## Tasks

- ▶ Create an new *event* to be shared with **all**
- ▶ Encode binary to be shared with **CSIRT**
- ▶ Encode ip address to be shared with both **ISP** and **CSIRT**
- ▶ Encode domain and url to be shared with both **ISP** and **CSIRT**
- ▶ Encode bank account to be shared with **Financial sector**
- ▶ Encode phone number to be shared with **Telecommunication sector**
- ▶ Encode full name and nationality to be shared with **LEA only**
- ▶ Add relationships to recreate the events
- ▶ Add time component to recreate the chronology
- ▶ Perform enrichments on the binary, and domain
- ▶ Add contextualization
- ▶ Create a small write-up as an *event report*
- ▶ Review the distribution level and publish

- Create the event report with a concise name
- Example: Executive summary of the case
  - ▶ Leave its content empty as it can be edited with more ease in the editor afterward
- Write a summary with
  - ▶ Quick chronology
  - ▶ Written explanation of the steps tooks by the scammer
  - ▶ Reference to existing attributes or objects whenever possible
    - The special syntax is: @[scope]{uuid}

# CASE STUDY 1: SCAM CALL

Create a small write-up as an *event report*

## Executive summary of the case

A victim was called by the suspected scammer `person Wallace Breen` using the following number: `phone-number +12243359185`. The scammer pretended to be a microsoft employee, managed to convince the victim that he could help by using remote desktop assistance.

Once he had access, the scammer downloaded a binary `file bin.exe` from the following url `url https://zdyot.ugic0k.ru/assets/bin.exe`. He then proceed to install the binary, probably to use it a backdoor for future access.

After the installation, he asked the victim to transfer money to the scammer bank account: `bank-account ⇄ iban GB29NWBK60161331926819`

The day after, the victim suspecting a scam contacted the police.

## Technique used

Social vector	<code>veris.action:social-vector="Phone"</code>
Potential hacking vector	<code>veris.action:hacking-vector="Desktop sharing"</code>
Actor motive	<code>veris.actor:external-motive="Financial"</code>
Impacted loss	<code>veris.impact:loss-variety="Asset and fraud"</code>
Loss rating	<code>veris.impact:loss-rating="Minor"</code>

## Information collected after analysis

- According to the phone number, IP address and bank account, the scammer `person Wallace Breen` is very likely based in `geolocation ⇄ country Belgium`.

### Review the distribution level and publish

- In our case, we consider the following MISP network topology
- The current instance is owned and managed by a LEA
- The current instance is connected to a central MISP instance acting as a "hub"
- The "hub" is connected to various other MISP instances such as other LEAs, CSIRTs, Financial and telecom institutions
